QUALITY VALVE MANUFACTURER

QUALITY COMMITMENT

Quality is Our First Priority.

Consistent product quality and a proven track record makes Australian Pipeline Valve a dependable choice where total reliability is the number one concern.

Since its founding, APV's philosophy has been focused on quality. Our valves are manufactured in full compliance to worldwide standards (such as ASME/ANSI, API, EN, ISO, BS, AS).

FIRESAFE & FUGITIVE EMISSIONS CERTIFICATES

DNV WITNESSED

Australian Pipeline Valve is one of the few companies in the world to hold firesafe certification to the latest 6th edition of AP I607 and ISO 10497. In addition, APV ball valves are fugitive emission certified to ISO 15848.

METAL SEATED BALL VALVE TRUNNION & FLOATING OVERVIEW

For certain applications such as abrasive media or high temperature, it is unthinkable to use soft seated ball valves and the best solution would be to have a top quality metal seated valve at a reasonable price.

APV is glad to introduce it's range of METAL SEATED BALL VALVES, a high performance, high quality, standard production ball valve with competitive price and relatively short delivery term.

APV meets the market demand for a valve that will perform critical service but which can be tailored to suit different needs at a cost effective price.

The production of APV METAL SEATED ball valves has been divided in two different categories: LOW PRESSURE / HIGH TEMPERATURE and CORROSIVE / ABRASIVE SERVICE.

FS9000-MS

- Precision machined external stem bearings eliminate radial movement which causes packing wear.
- Extensive stuffing box with dual anti-extrusion rings keeps packing in place and eliminates leak paths.
- Tested to MSS-SP-61, API 598, ISO5208 or Class V or VI shutoff.
- The ball and seats are mate-lapped for 100% sealing area contact which ensures absolute shutoff.
- Fire safe to API 607 5th & 6th Edition.
- The ball protects the seats from flow when the valve is open or closed which reduces wear on sealing surfaces.
- The seat spring combined with line pressure provides a constant mechanical force while allowing for thermal expansion.
- Each valve is individually tested prior to leaving the factory.
- All pressure containing components meet or exceed the ASME B16.34 and ASME Section VIII standards, and API 6D.

DIMENSIONS & MATERIALS

Please refer to APV Soft Seat Split Body dimension tables & materials. Ball, seat and stem can be hardened chrome, tungsten carbide, stellite, nitrided to 900 Hv 0.3mm etc.

FS9000-MS SERIES - DESIGN FEATURES

Stem
Hard Surfaced
Multi-Packing Design
Anti-Blow-Out
Anti-Static

Seat Design

Designed to 'scrape off' and resist slurries, muds or other viscous fluids & solid mediums. Special Hardened Surface Treatment: Stainless Steel + HCr/TC/Stellite etc.

Flexible Graphite Stem Packing
For Severe Services &
High Temperature

Fire Safe Design

Seat Spring Design

Metallic energised design provides flexibility to stress and thermal expansion. Elastomer free for high temperatures will not jam like conventional coil springs.

Ball

Hardened Surface Treatment
Stainless Steel +HCr/TC/Stellite...etc.
For High Temperature,
Abrasive Services

Drain

For drain or DB&B

Double Contact Metal Seat Design

Profiled Metal Seat Design

Slight roundness of the seat ensures continuity of contact.

Rigid metal permanent contact absorbs seat thrust due to differential pressure.

Flexible metal permanent contact provides seal irrespective of non-uniform deformation of the sphere.

Indicative design only. Numerous design configurations available depending on size class etc.

SLFSBV01-MS SERIES METAL SEATED BALL VALVE FLOATING - FLANGED STYLE

FIRESAFE CERTIFIED API 607 5TH
EDITION AND API 6FA 3RD EDITION

Body materials	Cast Steel (WCB), Stainless steel (CF8M) etc
Pressure rating	ANSI 150, 300 & 600
Temperature	10°C ~ 500°C
Size	15mm ~ 300mm (1/2" ~ 8")
Applications	High temperature, Abrasive & corrosive Services
Construction	Stainless steel seat & ball, graphite gasket for body sealing, anti blow-out stem. Both seats are 304SS or 316SS stellite, nitrided or hard chrome. The ball is 304SS or 316SS stellite or hard chrome/nitrided. The stem is 304SS or 316SS or 17-4PH hardened/nitrided or stellite.

FEATURES:

- Same face to face dimensions as API 6D standard teflon seated ball valves for easy changeover and replacement
- Quick 90° operation
- Tight shut off (Class V & VI available)
- Full through flow - no obstruction to fluid, minimum pressure drop
- Long service life

1. Durability

The metal contact mechanism between ball and seat is ensured by spring energised seat and provides long life.

2. Half opening control

The metal mechanism enables the possibility of half opening the valve to control flow. Consult us, as options like V-Port may need to be considered. Also extreme wear through cavitation can occur when valve is in half open position.

3. Low torque operation

Small friction coefficient between ball and seat, and spring energised seats make manual operation easy.

4. Leakage

The seat is spring energised against the ball to maximise the effectiveness of the seat sealing process. Design is class V or VI shut off, uni-directional (also available bi-directional)

ISO 15848-1 Class CO2
Fugitive Emission Certified

API 607 6th Ed. & ISO 10497
Firesafe Certified

AS 4617, AS 4629

BV100-MS SERIES (MODEL KI-L830)

METAL SEATED BALL VALVE 8~50NB

- Size Range: 1/4" - 2" (DN8 - DN50)
- Pressure Rating: 2000 PSI (800 Class)
- End Connection: Threaded, Socket Weld and Buttweld
- Service Application: Slurries, Pulp Stock, Solid-Containing Fluids
- Firesafe API 607

SEATING SYSTEMS FOR ABRASIVE & DIRTY SERVICE COMPOSITE SEATING

Since leather was combined with timber to improve the bow, composite solutions have provided solutions for demanding applications. Yet when it comes to trunnion ball valve seats, most manufacturers only offer a single seat insert solution which is easily damaged. Service considerations include temperature, media type, pressure etc. In the end materials like Nylon, Devlon & PEEK® are a compromise that must serve many masters. Hard seat inserts have no resilience or memory for indentations and can have trouble sealing at very low pressures. In addition, these materials increase the valves torque and reduce the temperature range.

APV offers double & triple seating solutions utilising metal, teflon, hard Viton, Devlon etc. In addition we can supply special 'cam action' axial lift seats that lift off during opening & closing protecting the seat from high velocity & abrasive damage.

Seat types include:-

A-PMSS®-PRIMARY METAL SECONDARY SEAL

This design provides 'metal to metal' class IV or V shut off in addition to API598 zero leakage provided by a resilient seat insert. This is a conventional seating design but APV optionally reduces the standard metal to metal tolerances for drip tight or bubble tight applications.

A-PMSS+S®-PRIMARY METAL SECONDARY SEAL + SCRAPER

The A-PMSS+S® design is the same as the PMSS® above except for the addition of a scraper. On conventional trunnion ball valve seating systems, APV offers the PR-A-PMSS+S® seat design option (8" and above). A protective scraper ring is inserted in front of the soft seat insert to remove solid particles, dirt or debris that could damage or clog the contact area between ball and soft seat insert ring. This feature assures that the working area of the seat will be clean allowing the seats to work effectively. This design prolongs seat life whilst only minimally increasing cost and is particularly advantageous for valves that cannot be removed from the line for repair such as butt welded valves, welded body valves, buried service valves as well as known non clean service applications.

A-DRS®-DOUBLE RESILIENT SEAL

This design marries teflon or an elastomeric seal such as hard viton which has excellent memory providing indentation resilience with Devlon, Nylon or PEEK® which handle higher pressures but are also more scratch resistant. Even with this system there is still primary metal to metal seating but it is not mated lapped like in the PMSS® Seat.

A-TRS®-TRIPLE RESILIENT SEAL

In addition to Double Resilient Seal® a third hardened Viton resilient seal is added which has more resilience to indentation & ensures a bubble tight seal even at very low pressures. This third seal will still also handle high pressures even if the other two seals fail. Many manufacturers use this as their only seal.

The above systems are ideal for applications that require redundant sealing and where access to repair the valve is not feasible. Lower torque and lower shut off pressures are additional advantages of this design.

In summary, these seating systems provide a much longer leak free life at a lower cost compared to metal to metal seated ball valves and can be supplied in quicker delivery. These seating systems offer the additional advantages of lower torque as well as high and very low pressure sealing assurance.

APV can also hard coat and treat ball and/or seat with low friction sintered coatings to reduce friction coefficient and solve wedging problems.

TOP ENTRY RISING STEM BALL VALVE OR-B150 SERIES - OVERVIEW

The **APV Rising Stem Trunnion Mounted Ball Valve** design provides true friction free operation. The valve features a mechanically set sealing feature that provides a bubble tight shutoff against liquids and gases. There is no pinch point effect to wiredraw seats or core face. The valve is designed to be inherently firesafe and incorporates an anti-blowout stem feature. The OR-B150 valve is suitable for use in petrochemical industries, liquified petroleum gas storage, refinery, natural gas, compressor system, oil and gas transportation pipelines, light industry and other industries.

FEATURES

1. Stem packing design reduces emissions through bonnet. Packing is injectable while valve is in-line.
2. In-line repairable. Top entry design provides easy repair after shutting off flow.
3. Springs which will weaken with use, are not required for sealing.
4. Mechanically energised tight seal, non lubricated, differential pressure not required for sealing, single seat design means no need for thermal relief.
5. Perpendicular movement of ball away from seat allows immediate full flow, preventing uneven erosion or abrasion of seat or ball. Also provides low torque.
6. Firesafe combination of metal and soft seat.
7. No cavity to trap product.
8. Wedge type sealing tapers at bottom of stem provide a mechanically energised and adjustable dead-tight seal at all pressure ranges. Wear resistant hard ball provides long life.

Special services easily accommodated i.e. high temperature, H2S service, low temperature etc.

PIG BALL VALVES BVF100 FEP SERIES

PRODUCTION RANGE

DN 50-600 NPS 2" - 24"

PN16, 25, 40, 64, 100

ANSI: Class 150, 300, 600, 900, 1500

Operation: Manual, Pneumatic, Electric

Medium: Water, Oil, Natural Gas, etc.

(Working Temperature): -29°C ~ +200°C

FEATURES

- Reduced space & weight requirements without expense of pigging traps
- Can retro fit in existing lines without expensive bypass modifications.
- APV Pig Valves provide a double block & bleed valve that can send or receive pigs.
- Safe, efficient, cost effective means for pigging.
- Capable of sending and receiving "Bullet", "Scraper" and "Spherical" type pigs.
- Trunnion mounted ball for extended seat life and ease of operation (all size ranges).
- Environmentally superior to Pig "T's" and Traps.
- Standard temperature range is -50°F (-46°C) to +250°F (+121°C).
- Body available in LF2, A105, WCB, 316 etc.
- Available for both sweet and sour services.
- Designed in accordance with ANSI, API, MSS and NACE requirements.

FORGED STEEL TOP ENTRY BALL VALVE FSTE SERIES - TRUNNION MOUNTED

Range of Material

APV's top entry ball valves have complete flexibility in the use of materials for body, trim and seal gasket selection. For this reason, they can be trimmed to meet your most severe applications.

Body/Bonnet Material

- Carbon steel
- Stainless Steel
- Duplex Stainless Steel
- Nickel Alloy
(Inconel, Incoloy, Hastelloy, Monel)

Trim Material

- Carbon steel+ (Overlay or Hard facing)
- Stainless Steel
- Duplex Stainless Steel
- Nickel Alloy
(Inconel, Incoloy, Hastelloy, Monel)

Material for Seat Inserts

Material for seat inserts are selected among the best polymers in order to meet the critical conditions of temperature, pressure and corrosive fluids.

- PTFE, PEEK, Devlon, Viton, Metal

Hard Facing options

Stellite, HVOF (TCC, CCC, others)

Self Fluxing Alloy Powder Coating (Ni Base)

FORGED STEEL TOP ENTRY BALL VALVE

CAST STEEL TOP ENTRY BALL VALVE CSTE - KIF SERIES FLOATING BALL CLASS 150/300

DESIGN FEATURES

- Top Entry, Floating Ball
- Body-cover Bolted joint not affected by Pipe stress
- Firesafe, blow-out proof and Anti-static stem
- Tight shut-off and long cycle life
- Permits In-line access for seat replacement
- Welding into line possible without disassembly
- Mechanically energised seat
- Flanged, BW, SW, NPT ends

Flanged Ends

SW, NPT Ends

Buttweld Ends

Steam Jacketed

CAST STEEL TOP ENTRY BALL VALVE

CSTE - KIF SERIES FLOATING BALL

QUALITY ASSURANCE AND CERTIFICATION

We are continually improving all facets of quality assurance. Full metallurgical and test certificates are always supplied for all pressure retaining parts, we also provide it on all major trim components.

We have endeavoured to provide a broad outline of our range and capabilities. Because we are continually developing new products for our customers this catalogue will, to some extent be incomplete. This catalogue is a general overview only, individual drawings and data sheets can be furnished on request.

If you have any requirement in the field of valves, please contact us for a prompt response. Continuous development of Australian Pipeline Valve products may necessitate changes in the design or manufacturing processes. Australian Pipeline Valve reserves the right to effect any such changes without prior notice.
